

Treatment severity and safety columns

CSV column	Exact source header	Clean field and unit	Interpretation and rule
39	"treatment_details PreOp (TG-PRK+ACXL) vs (ACXL alone)"	treatment_source_label	44 CXL only, 7 CXL, 27 PRK with CXL and 1 CXL with PTK. Provisional CXL labels do not prove accelerated protocol; PRK label does not prove topography guidance.
40	"Amsler-Krumeich Classification "	amsler_krumeich_stage_source	61 populated entries; stages 1 to 4 allowed after source verification. Do not derive severity solely from Kmax.
42	"Haze_Present post op (yes/No) "	haze_postop_source_text	78 entries. No or No haze is explicit absence at an unspecified observation; positive descriptions imply haze, but onset, grade, persistence and endpoint timing remain unverified. Mild old haze requires source adjudication.
