

Table 1 Screening, cohort formation and endpoint availability

Footnote: use one principal exclusion reason per eye for a reconcilable flow, and retain all reasons in the screening log. Planned 30 eyes per group must not appear as achieved numbers. The same patient may contribute to both treatment columns if fellow eyes received different procedures.

Stage / reason	Eyes	Patients	Evidence / denominator
Raw extract	79 eye-record rows	Unverified	Current CSV after four administrative headings; eligibility not established.
Verified eligible TG-PRK + ACXL	[pending]	[pending]	Operative record + eligibility adjudication.
Verified eligible ACXL alone	[pending]	[pending]	Operative record + eligibility adjudication.
Excluded: age under 18	[pending]	[pending]	Verified age at index treatment.
Excluded: other procedure / prior surgery / contraindication	[pending]	[pending]	Break out individual reasons in screening log.
Pending eligibility / procedure verification	[pending]	[pending]	No inference from blank source fields.
Eligible, primary endpoint unavailable	[pending]	[pending]	Missing CDVA / no valid visit / missing dates, shown separately.
Observed dated CDVA endpoint	[pending]	[pending]	Nearest valid visit in 10–14-month window.
Main complete-case prediction sample	[pending]	[pending]	Observed outcome plus all six predictors and patient linkage.
Model executed	Not run until ready	—	Feasibility and governance gate documented.
